

TRUE LOCK Distal Ulna Anatomic Plates are indicated for fixation of fractures, osteotomies, nonunions, replantations, and fusions of small bones and small bone fragments, particularly in osteopenic bone.

Anatomical plate; right & left.

2 hole option between 3-4.

TRUE LOCK Distal Ulna Anatomic Plates are made of Ti6Al4V ELI material (ASTM F136).

TRUE LOCK Distal Ulna Anatomic Plate Features

Round locking holes in the head accept 2.3 mm locking screws.

TRUE QUALITY

Kirschner wire holes accept Kirschner wires (up to 1.5 mm) to temporarily fix the plate to the bone, to temporarily reduce articular fragments, and to confirm the location of the plate, relative to the bone.

Elongated Combi holes in the neck and shaft facilitate plate adjustment and allow locking or compression options.

Narrow plate design, low screw-plate profile, rounded edges and polished surface are designed to minimize irritation of overlying soft tissue.

TRUE LOCK Distal Ulna Anatomic Plate Screws Info

Reference Number:	Hole Count:	Length (mm)
(L) 201-10461-003 (R) 201-10462-003	3 hole	45
